Pratt School of Information

DSL Data Storytelling Lab

Scraping and Analyzing Social Media Data with *Zeeschuimer*

Dr. Craig Fahner School of Information

In this workshop, learn how to archive social media content with Zeeschuimer, a browser plugin developed by the Digital Methods Initiative at the University of Amsterdam. Zeeschuimer monitors network activity on social media sites such as Facebook, Instagram, TikTok, X, etc. It collects unstructured data from social media feeds and produces structured datasets, allowing researchers to access and analyze social media posts in a variety of contexts. Zeeschuimer is a useful tool for examining the operation of recommendation algorithms, since it can monitor and archive individual Instagram news feeds. This workshop will explore how to archive personalized news feeds using this tool, and how to visualize, analyze, and annotate that data.

Open to all Pratt graduate students and faculty

November 12
3:00 – 4:30 PM
PMC Room 714
